

# HARVARDKEY

One Key. Many Gateways.

Advances in provisioning and authentication technologies at Harvard don't just make user access safer and more secure — they also offer an important opportunity to unify and streamline user experience at every step along the lifecycle of University affiliation.

**That's why we're introducing HarvardKey.**

A unified credential that unlocks access to applications and services spanning the entire Harvard Community, HarvardKey gives users a single identity for life — accompanied by simple, self-service onboarding, the ability to change password or personal details with only a few clicks, and a seamless user experience when access rights change.

As rollout progresses, **key.harvard.edu** will be home to a self-claiming app for new Harvard users, a self-service portal for existing Harvard Community members, and an immediately recognizable login interface for systems accepting HarvardKey credentials.

- **Easy onboarding:** New Harvard users visit [key.harvard.edu](http://key.harvard.edu) to verify their identity, select a password for their HarvardKey, and get the onboarding process started.
- **Self-service portal:** Over the life of a user's membership in the Harvard Community, he or she can visit [key.harvard.edu](http://key.harvard.edu) at any time to easily change his or her password or other personal details.
- **Unified login interface:** Users will see HarvardKey login screens whenever they access University applications and services, reinforcing that personal data is safe and secure.
